PROFILE SUMMARY

Software Engineer with experience in MERN Stack and .NET development, focused on developing scalable, efficient, and user-centric web applications. Strong interest in building and testing real-world software solutions and continuously learning emerging technologies, including Artificial Intelligence, to enhance future applications.

EDUCATION

NED University of Engineering and Technology, Karachi

2022 – 2026

B.E- Software Engineering

EXPERIENCE

Dot NET Developer Intern | Pakistan International Airlines (PIA)

June 2025-Aug 2025

- Collaborated with senior developer to develop and enhance web applications using ASP.NET and C#.
- Improved the Telephone Directory System by implementing new features and modernizing the user interface to enhance usability.
- Contributed to the Cannibalization Management System for tracking aircraft parts donation, utilization, and inventory records.

PROJECTS

LeakSense - Water Leakage Detection in Pipelines | FYDP

- Developed an IoT-based water leakage detection device and system using Piezoelectric Sensors and ESP32.
- Trained a CNN model to detect and classify water leakage patterns from sensor data.
- Designed and developed a Flutter-based mobile application and Web Dashboard for real-time monitoring, leakage alerts, and system status updates.

Cannibalization | .NET, C#, MYSQL

- A full Stack .NET project for the airlines System to manage the Aeroplane Approval documentation system by developing a role-based form rendering feature.
- Automated the generation of multiple role-based forms on workflow steps to streamline approval processes

FoodRequest | MERN

- Built a full-stack, role-based food delivery app (Customer, Restaurant, Rider, Admin) with MERN
- Integrated real-time order tracking, Stripe payments, and Cloudinary image uploads.
- Developed dedicated dashboards per role including menu management, rider shift tracking, and admin panel with analytics and approval workflows.
- Implemented AI-powered food search and live order status notifications across all user roles.

ArtisanHub | MERN

- A full-stack e-commerce platform built using the MERN stack designed to support local artists.
- The system features a single admin panel and supports multiple sellers and users.

Metal Wellness App | Flutter, Dart, Firebase, Restful API's

- Mobile application built with Flutter and Firebase for self-care and mental wellness.
- Features AI-powered therapy, Meditation, Music therapy, and thought journaling.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, SQL, Dart, Flutter, NodeJS, .NET, C#

Technologies/Frameworks: HTML5, CSS3, React, MongoDB, Firebase, Express, JavaScript.

Developer Tools: VS Code, PyCharm, Visual Studio, Git/Github, StarUML, SQL Server.

SOFT SKILLS

Communication, Teamwork & Collaboration, Problem-Solving, Leadership, Adaptable.

CERTIFICATES

- Python Basics –Udemy
- AI / ML BootCamp – Artificial Intelligence Club
